ABSTRACT

A file transfer system is provided that typically includes an originating file transfer host that includes a script server and an originating file transfer server. The script server typically receives a file and a script from a remote terminal, interprets the script, and transfers the script and the file to the originating file transfer server. The originating file transfer server receives the script and the file from the script server and transfers the file to a terminating file transfer server in accordance with the script. Methods and other systems are also provided.
